Summary

As a Lead SDET with hands-on expertise in backend testing and automation, I drive quality strategy across complex systems while mentoring and guiding high-performing QA teams. I specialize in designing scalable test frameworks, leading cross-functional integration efforts, and ensuring reliable, high-quality releases in fast-paced, distributed environments. With a strong focus on ownership, innovation, and collaboration, I bridge the gap between engineering and quality, consistently delivering results that improve product reliability, accelerate release cycles, and enhance customer experience.

Skills

Frameworks	Selenium, RestAssured, Cucumber, BDD
DevOps Tools	Docker, Git, Jenkins, AWS ECS
Databases	PostgreSQL, Oracle, InfluxDB, DynamoDB
Languages	Java, Python, C++, SQL
Automation Tools	JMeter, Locust
Other Tools	Linux, IntelliJ, Maven, ChatGPT, Postman, Soap UI

Technical Experience

Lead SDET (Backend)

03/2025 — Present

Swiggy, Bangalore, Karnataka

- Leading a team of 3 SDETs, owning quality for critical user journeys from cart creation to order completion, including billing, refunds, and returns.
- Defined and executed automation strategy, increasing test coverage from 60% to 93% and reducing regression cycles by 60%; leveraged AI tools (Cursor, Claude Code) with optimized prompts to improve efficiency and reduce token usage.
- Built and scaled reusable automation frameworks, improving execution efficiency and reducing flaky tests by 40%.
- Led cross-team integration testing for new feature launches, coordinating across teams, tracking progress, and driving end-to-end validation and sign-off.
- Developed a Slack-based regression orchestration bot using n8n, enabling teams to trigger targeted test suites by service and environment, improving accessibility and reducing manual effort.
- Performed performance testing using Locust and JMeter for new feature releases, especially involving third-party integrations, to identify bottlenecks and ensure system stability.
- Mentored SDETs and drove engineering best practices, improving team productivity and code quality.

Senior SDET (Backend)

05/2023 — 03/2025

CRED, Bangalore, Karnataka

- Worked on complex FinTech systems with high security and reliability needs.
- Drove development and execution of end-to-end test plans for new product lines.
- Led automation-first initiatives for new microservices, increasing automation coverage by 30%.
- Built a stateless mock response service for testing.

- Developed a Slack bot to help QA teams manipulate backend data without API or DB knowledge.
- Enhanced test reliability through shared automation frameworks and utilities.
- Performed performance testing using Locust.

SDET (Backend + Web)

09/2021 — 05/2023

Innovaccer, Noida, Uttar Pradesh

- Tested healthcare applications across APIs and UIs following the STLC process.
- Conducted manual API testing using Postman and automated backend APIs with RestAssured.
- Created UI automation using Selenium with BDD and Cucumber.
- Scheduled automation runs with Jenkins and conducted load testing with JMeter.
- Built automation for daily monitoring and alerts via Slack.
- Designed a Twilio-based IVR suite cutting costs by 95%.
- Created a Django-based performance suite and monitored data consistency with InfluxDB.

Intern — Wipro Talent Next Program

06/2020 — 07/2020

Wipro

- Project-based training in Java.
- Robotic Process Automation using UI Path.

Education

Bachelor of Technology in Computer Science
